

Cockpit Under Seat Storage

- Under the starboard bench there are several containers that I purchased from The Container Store:
 - One 23"x17"x8" container furthest forward that stores the pop top enclosure
 - Two 21"x14.75"x9.75" containers in the middle. Each of these containers has two levels so it's like two containers in one.
 - One 17.5"x11.75"x8" container
- Under the port bench, there are
 - Two 3 gallon gas cans stored side by side aft
 - A small container
 - A low and long storage 15.5"x35.5"x5" container in front of that. This came from Walmart. On top of that I have a large collapsible bucket that I purchased from Amazon. Beneath the port bench there is a boat hook mounted on clips. The cockpit filler planks are stored all the way to port, past the storage container. These are held in place with HPDE pieces as well as bungees between eyes.
- I added square aluminum bars to keep the underseat storage in place. These fit into HDPE mounts that are screwed and glued into the bulkheads.

Cockpit Under Seat Storage

You can see the fasteners for the wood inside the lazarette. You can also see the HDPE mounts for the aluminum bars. There are two layers of HDPE: one rectangle and then pieces that make up a U shape on top of that to provide the slot for the aluminum bars.
